

SCOTT ALTMAN ON FOX ON TECH TRANSCRIPT

Intro: 00:06 - 02:02

Fox on Tech.

Eben Brown: 02:02 - 21:08

There are a lot of eyes on Artemis I this week. This is NASA's new moon spacecraft. And while Monday's launch was scrubbed, it is interesting to note the new rocket is using some older yet still impressive technology, stuff that came right off the space shuttle.

Scott Altman: 21:16 - 31:05

While we're reusing parts from the shuttle program, like the shuttle main engines, there is a different plumbing system to get to it a different way that the lines are recharged.

Eben Brown: 31:05 - 41:08

Scott Altman is with NASA's contractor, ASRC Federal, but he is also a retired astronaut and shuttle commander who flew in four missions.

Scott Altman: 41:10 - 49:27

Now they're going off and figuring out is it a hardware change or is it a software change? Can we fix this? You want everything to be right before the vehicle leaves the pad?

Eben Brown: 50:00 - 59:16

Artemis' rocket called, the SLS is the tallest and the most powerful earthlings have ever built with Fox on Tech. I'm Eben Brown. Fox News.
