

Software, Applications & Analytics

CAPABILITY OVERVIEW

When it comes to today's software services and solutions, the status quo is never enough -- we are constantly enhancing our engineering, development and analytics. Our DevOps/SecOps and Agile capabilities, machine learning and advanced analytics offerings, and full suite of software development solutions help you gain actionable intelligence and bring the latest software and tools to the forefront of your agency operations.

Lessen the worry of app failure or system downtime with our end-to-end software support services, including back-office and customer-facing IT apps and systems. Our engineering and IT teams can also help you navigate system design, development, modernization, operations, and maintenance.

AREAS OF EXPERIENCE

Software and Application Development

As a Scaled Agile Framework® (SAFe) Gold partner, we live and breathe Agile development. Whether it's training your employees to be product owners, building Agile Release Trains from the ground up, or working as part of an existing development team, we bring world-class development knowledge to your programs.

Software Lifecycle Services

Building great software is one problem; accrediting, supporting, and maintaining it is another. We have dedicated engineering, IT, and support teams that can help ensure your software meets its accreditation requirements, up-time requirements, and is available when and where your users need it.

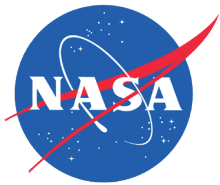

Advanced Analytics

Our machine learning, advanced analytics, and data science tools provide you with the actionable intelligence you need to solve complex challenges and make the best decisions for your organization. We help clients manage their data processing and analysis platforms, tools and services, and provide geospatial intelligence support for defense and space missions.

Mission Software Engineering

Whether your mission is intelligence-, space-, or ground-based, our technical and engineering teams provide lifecycle engineering services to develop software that improves your platform's availability, readiness, and system reliability.
